④ For Macintosh Computer Installation

1. Mac OS8.6

   Using the USB floppy at Mac OS 8.6 you need to update the Mass Storage Device Support driver, Version 1.3.5 from www.apple.com For more information please read the **MACUSER.HTM** at the folder of Mac of USB Floppy Disk Driver CD.

2. Mac Os9

   At Mac Os9, do not need to install any driver. The required driver is already embedded within the Mac OS.

3. Ejecting Floppy Disks (Macintosh Only)

● Click the floppy disk icon one to highlight the icon.

● Select "Eject" from the "Special" menu, or "Put Away" from the "File" menu.(Alternatively, you can drag the floppy disk icon to the Trash)

● Wait for the status indicator led on the front panel of the USB Floppy Disk Drive to turn off.

● Push the eject button on the front panel of the USB Floppy Disk Drive to eject the floppy disk.

4. Remounting unmounted volumes

   To mount or remount a USB mass storage volume on the Desktop, unplug and replug the device that contains the volume into a USB port on the computer, or into a hub attached to the computer. The volume should appear on the desktop in a few seconds. If the device uses removable media, the volume will not appear until the removable media is reinserted into the mass storage device.
