

## Настройка виртуальных хостов

на примере 3-х хостов localhost, site1, site2

Файл **httpd-vhosts.conf** (xampp → apache → conf → extra)

```
NameVirtualHost *:80

<VirtualHost *:80>
  ServerAdmin my@email.ru
  DocumentRoot "/xampp/htdocs/localhost"
  ServerName localhost
  ErrorLog "logs/localhost-error.log"
  CustomLog "logs/localhost-custom.log" common
</VirtualHost>

<VirtualHost *:80>
  ServerAdmin my@email.ru
  DocumentRoot "/xampp/htdocs/site1"
  ServerName site1
  ErrorLog "logs/site1-error.log"
  CustomLog "logs/site1-custom.log" common
</VirtualHost>

<VirtualHost *:80>
  ServerAdmin my@email.ru
  DocumentRoot "/xampp/htdocs/site2"
  ServerName site2
  ErrorLog "logs/site2-error.log"
  CustomLog "logs/site2-custom.log" common
</VirtualHost>
```

Файл hosts (Windows → System32 → drivers → etc)

```
127.0.0.1 localhost
127.0.0.1 site1
127.0.0.1 site2
```
