A copy of the specific warranty terms applicable to your Hewlett-Packard products and replacement parts can be obtained from your HP Sales and Service Office or authorized dealer.

# Event Log Messages

#	Message	Severity	Description
0	Unknown var type	fatal	The variable type is unknown. RMON_SNMP_UNKNOWN_VAR_TYPE
1	<vlan-id> virtual LAN enabled	info	The specified virtual LAN is enabled. RMON_VLAN_UP_INDIC
2	<vlan-id> disabled	info	The specified virtual LAN is disabled. RMON_VLAN_DOWN_INDIC
3	Changing IP address to <ip-addr>	info	Changing the current IP address to the specified IP address. RMON_IP_IP_ADDR_CHANGE
4	IP initialization failed for vlan <vlan-id>	warning	IP initialization on the specified VLAN has failed. RMON_IP_VLAN_INIT_ERROR
5	ARP: <ip-addr> at <mac-addr> <encap-type>	info	A new entry has been learned through the Address Resolution Protocol (ARP) and added to the IP address translation table. The new entry consists of the specified IP address (host address), MAC address (physical address), and the type of encapsulation used (for example, ENET or SNAP). RMON_IP_ARP_INSERT
6	—	—	Reserved RMON_IP_RESERVED21
7	Entity enabled	debug	IP routing has been successfully enabled on the switch. RMON_IP_ENABLED
8	Invalid ARP source: <ip-addr> on <ip-addr>	info	The specified ARP source address is invalid for the IP address. RMON_IP_INVALID_ARP_SOURCE
9	Invalid ARP Target: <ip-addr> on <ip-addr>	info	The specified ARP target address is invalid on the IP address. RMON_IP_INVALID_ARP_TARGET
10	—	—	Reserved RMON_IP_RESERVED20
11	ICMP: Unsolicited Echo Reply from <ip-addr>	warning	There has been an unsolicited reply from the specified IP address. RMON_IP_UNSOL_ECHO_REPLY
12	Network enabled on <ip-addr>	info	The network is enabled on the specified IP address. RMON_IP_NETWORK_ENABLED
13	Network disabled on <ip-addr>	info	The network is disabled on the specified IP address. RMON_IP_NETWORK_DISABLED
14	Duplicate IP network	fatal	There are two networks with the same IP address. RMON_IP_DUPLICATE_NET
15	—	—	Reserved RMON_IP_RESERVED19
16	Bad ip address <ip-addr>	fatal	Invalid IP address. RMON_IP_BAD_IP_ADDR

## Event Log Messages

#	Message	Severity	Description
17	Bad mask <ip-addr><mask>	warning	Invalid mask. RMON_IP_BAD_IP_MASK
18	IP address <ip-addr>/<mask> configured on vlan_id <vlan-id>	info	The specified IP address has been configured on the VLAN. RMON_IP_ADDR_ADD
19	IP address <ip-addr> removed from vlan id <vlan-id>	warning	The specified IP address has been removed from the VLAN. RMON_IP_ADDR_DEL
20	MAC address <mac-addr> configured on vlan id <vlan-id>	info	The specified MAC address has been configured on the VLAN. RMON_IP_MAC_ADD
21	MAC address <mac-addr> removed from vlan id <vlan-id>	info	The specified MAC address has been removed from the VLAN. RMON_IP_MAC_DEL
22-35	—	—	Reserved RMON_IP_RESERVED1 - 14
36	Too many COS rules configured - limit of <max- rules> exceeded	warning	An attempt to create more than the maximum number of QoS rules allowed has occurred. RMON_COS_TOO_MANY_ERROR
37	Some COS configuration items will not be active	warning	Some Class of Service (CoS) settings are not enabled. RMON_COS_NOT_ACTIVE_ERROR
38	VLAN <vlan-id> QoS not configured on all new ports. Some QoS resources exceeded.	warning	Some Class of Service (CoS) settings configured for the specified VLAN are not enabled on all ports. The threshold for certain QoS settings has been exceeded. RMON_COS_VLAN_COS_WONT_FIT
39	Too many QoS features enabled, mask resources exceeded	warning	Some of the items configured for Class of Service (QoS) will not be working. The maximum resources available have been exceeded. RMON_COS_MASKS_EXCEEDED
40	Initialization failed for TCP/UDP priority	warning	For CoS TCP/UDP priority, the initialization failed. RMON_COS_APPTYPE_INIT_ERROR
41-42	—	—	Reserved RMON_COS_RESERVED1 - 2
43	Unable to apply ACL <acl-name> to vlan <vlan-id>, failed to add entry <ace-num> to port <port-num>	warning	The ACL was not applied to the specified VLAN and the ACE entry was not added to the port due to a lack of hardware resources on the port. RMON_ACL_WONT_FIT_VLAN_ERROR
44	Unable to add ACL entry to vlan <vlan-id>, not enough hw resources on port <port-num>	warning	An ACE entry was not applied to an ACL, which has already been applied to the specified VLAN, due to a lack of hardware resources on the port. RMON_ACE_WONT_FIT_ERROR
45	Unable to add port to vlan <vlan-id>, not enough hw resources on port <port-num>	warning	The port was not added to the specified VLAN due to low hardware resources on the port. RMON_ACL_PORT_ADD_ERROR
46	Unable to add port to vlan <vlan-id>, GVRP is enabled	warning	The port was not added to the specified VLAN because GVRP is enabled. RMON_ACL_NO_CONFIG_GVRP

#	Message	Severity	Description
47	Unable to add port <port-num> to trunk, ACL is configured on vlan <vlan-id>	warning	The port was not added to a dynamic trunk because an ACL is already configured on the port. When an ACL is applied to a port, the port does not support a dynamic trunk. RMON_ACL_PORT_ADD_TRUNK_VLAN_ERROR
48	Unable to apply ACL <acl-name> to port <port-num>, failed to add entry <ace-num>	warning	The ACL was not applied to the port and the ACE entry was not added due to a lack of hardware resources. RMON_ACL_WONT_FIT_PORT_ERROR
49	Unable to add port <port-num> to trunk, ACL is configured on port.	warning	The port was not added to the trunk because an ACL is configured on the port. RMON_ACL_PORT_ADD_TRUNK_PORT_ERROR
50	Unable to add ACL to port <port-num>, an ACL is already configured on this port	warning	The ACL is not added to the port because an ACL is configured on the port. RMON_ACL_PORT_ADD_ERROR_ACL_CONFIG
51	Unable to modify ACL <acl-name>, ACL is applied	warning	The ACL name cannot be modified once it has been applied. RMON_ACL_MODIFY_ERROR
52	Unable to delete ACL <acl-name>, ACL is applied	warning	The ACL cannot be deleted because it is applied. RMON_ACL_DELETE_ERROR
53	Unable to apply ACL <acl-num> to vlan <vid> in direction <direction>, failed to add entry <entry>	warn	There was an error applying the ACL due to lack of hardware resources. RMON_ACL_VLAN_HW_RESOURCE_ERROR
54-55	Reserved		RMON_ACL_RESERVED1 RMON_ACL_RESERVED2 RMON_ACL_RESERVED3
56	Spanning Tree Protocol enabled	info	The spanning tree protocol has been enabled. RMON_STP_ENABLE
57	Spanning Tree Protocol disabled	info	The spanning tree protocol has been disabled. RMON_STP_DISABLE
58	STP: stp max age should be >= XXX STP: stp fwd delay should be >= XXX	warning	The STP Max Age or Forward Delay parameter should be greater than the value "XXX", where 'XXX' is calculated by the switch. RMON_STP_BAD_CONFIG
59	STP:BPDU has MAX_AGE 0 from port <port-num> STP: BPDU has HELLO_TIME 0 from port <port-num> STP:BPDU has FWD_DELAY 0 from port <port-num>	warning	The switch received a BPDU packet with an invalid Max Age, Hello Time, or Forward Delay value on the specified port. Check to see if the parameter was misconfigured on the other bridge. RMON_STP_BAD_BPDU
60	Bad reconfiguration request <request>	warning	An invalid configuration request has been made. RMON_STP_BAD_DYNAMIC_REQ
61	-----	info	Blank line RMON_BOOT_BLANK_LINE

## Event Log Messages

#	Message	Severity	Description
62	Management module <module-num> went down without saving crash information	info	The specified management module crashed without saving a crash record. RMON_BOOT_NO_CRASH_RECORD
63	Mgmt Module <mod-num> went down	info	The specified management module was rebooted. RMON_BOOT_CRASH_RECORD0
64	<crash-msg>	info	Text message explaining the reasons for a system crash, which may include the type of crash (out of resources or bus error), task name, filename and line number (bus address). RMON_BOOT_CRASH_RECORD1
65	Boot-up selftest failed	fatal	Self test failed while switch is booting up. RMON_BOOT_SELFTEST_FAILURE
66	System booted	info	System booted up. RMON_BOOT_COMPLETE
67	Slot <slot-num> removed	info	The module in the specified slot has been removed. RMON_CHASSIS_HOTSWAP_REMOVED
68	Slot <slot-num> inserted	info	A module has been inserted into the specified slot. RMON_CHASSIS_HOTSWAP_SELFTEST0
69	Slot <slot-num> Hotswap Failure	fatal	A module has been successfully hot swapped in the specified slot. RMON_CHASSIS_HOTSWAP_FAILURE
70	Fan <fan-num>: Fan: <fan-state> Failures: <num>	warning	A fan (fan 1 or fan 2) has failed or a failed fan is no longer failing, as indicated by the fan state (failure or OK). The number of times that the fan failed is also displayed. In case of failure, the fan fail LED is lit. RMON_CHASSIS_FAN_STATUS
71	Power Supply <pwr-supply>: Supply: <pwr-state>, Failures: <num>	info	One of the following power conditions exists: <ul style="list-style-type: none"> <li>The redundant power-supply (RPS) is failing.</li> <li>The RPS is operational but the main power supply is failing.</li> <li>A failed power supply is no longer failing.</li> </ul> The state of the power supply (main or RPS) is indicated as failure or OK. The number of times that the power supply failed is also displayed. In case of failure, the power fail LED is lit. RMON_CHASSIS_POWER_STATUS
72	Slot <slot-num> Inactive: Module/Configuration mismatched	warning	The module or configuration is incompatible for this slot. RMON_CHASSIS_MODULE_INCOMPAT
73	—	—	Reserved RMON_CHASSIS_RESERVED
74	—	warning	Unused RMON_BUF_PIG
75	Out of <msg_pkt> buffers; miss count: <num>	warning	The number of misses indicates the number of times that an attempt to allocate the specified message or packet buffer failed. RMON_BUF_MISS
76	Port <port-num> is now on-line	info	The specified port is now online. RMON_PMGR_PORT_UP

#	Message	Severity	Description
77	Port <port-num> is now off-line	info	The specified port is now offline. RMON_PMGR_PORT_DOWN
78	Trunk <trunk-num> is now active	info	The specified trunk is now active. RMON_PMGR_TRUNK_UP
79	Trunk <trunk-num> is now inactive.	info	The specified trunk is now inactive. RMON_PMGR_TRUNK_DOWN
80	Entity enabled	debug	DHCP has been successfully enabled on the switch. RMON_DHCP_ENABLED
81	Initialization failed	info	The initialization failed. RMON_DHCP_INIT_FAILED
82	Can't allocate any msg buffers	warning	No message buffers can be allocated. RMON_DHCP_NO_MSG_BUFS
83	Updating IP address and subnet mask	info	IP address and subnet mask are updated. RMON_DHCP_IP_UPDATE
84	Subnet in DHCP/BOOTP reply is already being used	warning	The subnet in the DHCP/BOOTP reply is already in use. RMON_DHCP_DUP_SENT
85	Unable to renew an expired DHCP lease.	warning	The expired DHCP lease cannot be renewed. RMON_DHC_RENEW_FAILED
86	Invalid IP address <ip-address> is received for Option 66	warn	The TFTP server IP address received for DHCP Option 66 is invalid. RMON_DHCP_INCORRECT_OPTION_66
87-96	—	—	Reserved RMON_DHCP_RESERVED1 - 11
97	No Resource for Download Request from <ip-addr> or <ipx-network-num>	info	The resource identified by the IP address or IPX network number, from which a remote download request was received, could not be found. RMON_SNMP_DOWNLND_NO_RESOURCE
98	Download Request Received from <ip-addr> or <ipx-network-num>	info	A download request was received from the specified IP address or IPX network. RMON_SNMP_DOWNLND_REQ_RCVD
99	Download: OS TFTP in progress, SNMP denied. From Switch Console or <ip-addr>.	info	A TFTP download may already be in progress. The current download attempt from the switch console or a remote device is temporarily denied. RMON_SNMP_DOWNLND_ABORTED
100	—	—	Reserved RMON_SNMP_DOWNLND_RESERVED2

607	Failed to alloc a PIM <data-type> pkt	standard	<p>The router was unable to allocate memory for a PIM control packet. Router memory is oversubscribed. Reduce the number of VLANs or increase the hello delay and/or the override interval to reduce the number of simultaneous packet transmissions. Note that if the number of flows exceeds 1022, the excess flows are routed in software, which reduces the number of packet transmissions. In this case, reducing the number of flows by moving some clients to other routers can help.</p> <p>RMON_PIM_PKT_FALLLOC_FAILURE</p>
608	Send error (<failure-type>) on <pkt-type> pkt on VID <vlan-id>	warning	<p>Indicates a send error on a packet. This can occur if a VLAN went down right after the packet was sent. The message indicates the failure type, the packet type, and the VLAN ID on which the packet was sent.</p> <p>RMON_PIM_PKT_SEND_FAILURE</p>
609	Pkt dropped from <ip-addr>, (<cause>), vid <vlan-id>	info	<p>A PIM packet from the specified IP address was dropped due to one of the following causes:</p> <ul style="list-style-type: none"> <li>• No PIM interface on the VLAN</li> <li>• Bad packet length</li> <li>• Bad IP header length</li> <li>• Bad IP total length</li> </ul> <p>RMON_PIM_PKT_DROPPED</p>
610	Pkt rcvd with a cksum error from <ip-addr>	info	<p>A packet having a checksum error was received from the specified IP address. Check the cabling and ports on the local and the remote routers.</p> <p>RMON_PIM_PKT_CKSUM_ERR</p>
611	Rcvd pkt ver# <ver-num>, from <ip-addr>, expected <ver-num>	warning	<p>The versions of PIM-DM on the sending and receiving routers do not match. Differing versions will typically be compatible, but features not supported in both versions will not be available.</p> <p>RMON_PIM_PKT_VER_MISMATCH</p>

## Event Log Messages

#	Message	Severity	Description
612	Rcvd pkt from rtr <ip-addr>, unknwn pkt type <value>	warning	A packet received from the router at the specified IP address is an unknown PIM packet type. (The <value> variable is the numeric value received in the packet.) RMON_PIM_PKT_TYPE_UNKNOWN
613	MCAST MAC add for <mac-addr> failed	warning	Indicates a hardware problem. Check the cabling and router ports. RMON_PIM_CANNOT_JOIN_MCAST_DEST
614	MCAST flow <mcast-addr> <src-ip-addr> not rteing (rsc low)	warning	The indicated multicast flow is not routing. The routing switch is low on memory resources as a result of too many flows for the number of configured VLANs. Remedies include one or more of the following: <ul style="list-style-type: none"> <li>• Reduce the number of configured VLANs by moving some VLANs to another router.</li> <li>• Free up system resources by disabling another feature, such as one of the spanning-tree protocols or either the RIP or the OSPF routing protocol. (Unless you are using static routes, you will need to retain a minimum of one unicast routing protocol.) Another option that may help is to reduce the number of configured QoS filters.</li> <li>• Move some hosts that create multicast demand to another router.</li> </ul> RMON_PIM_LOW_MEM_MCAST_FLOW
615	No IP address configured on VID <vlan-id>	fatal	PIM has detected a VLAN without an IP address. Configure an IP address on the indicated VLAN. RMON_PIM_IP_NOT_CONFIG
616	Multicast Hardware Failed to initialize	fatal	Indicates a hardware failure that halts hardware processing of PIM traffic. The software will continue to process PIM traffic at a slower rate. Contact your ProCurve customer care center. RMON_PIM_MCAST_ROUTING_HW_FAILURE
617	<alpha-str> pkt, src IP <ip-addr> vid <vlan-id> (not a nbr)	info	A PIM packet arrived from another router for which no neighbor was found. May indicate a misconfiguration between the sending and receiving router. May also occur if a connected router is disconnected, then reconnected. RMON_PIM_NO_NBR
618	Rcvd hello from <ip-addr> on vid <vlan-id>	fatal	Indicates a misconfiguration where two routers are directly connected with different subnets on the same connected interface. RMON_PIM_MISCONFIG
619	Rcvd incorrect hello from <ip-addr>	info	Indicates receipt of a malformed hello packet (the packet does not match the current specification). Ensure that compatible versions of PIM-DM are being used. RMON_PIM_BAD_HELLO
620	Rcvd unknwn opt <opt-nbr> in <text-str> pkt from <ip-addr>	info	The router received a PIM packet carrying an unknown PIM option. The packet may have been generated by a newer version of PIM-DM, or is corrupt. In most cases, normal PIM-DM operation will continue. RMON_PIM_UNKNOWN_OPT
621	Rcvd unknwn addr fmly <addr-type> in <text-str> pkt from <ip-addr>	info	The router received a PIM packet with an unrecognized text string encoding. As of February, 2004, the router recognizes IPv4 encoding. RMON_PIM_UNKNOWN_ADDR_FAMILY

#	Message	Severity	Description
622	Rcvd <text-str> pkt with bad len from <ip-addr>	info	A peer router may be sending incorrectly formatted PIM packets. RMON_PIM_BAD_LENGTH
623	Failed alloc of HW <alpha-str> for flow <mcast-addr>, <src-ip-addr>	info	There are more than 1022 active flows. The switch routes the excess through software, which processes traffic at a slower rate. If this will be an ongoing or chronic condition, transfer some of the flows to another router. RMON_PIM_HW_RESOURCE_FAIL
624	Failed to initialize <text-str> as a call back routine	fatal	Indicates an internal error. Report the incident to your ProCurve customer care center and re-install the router software. RMON_PIM_IP_ADDR_CALLBACK_FAIL
625	I/F configured with IP <ip-addr> on vid <vlan-id>	info	Indicates that the interface (VLAN) has been configured with the indicated IP address. At boot-up or when an IP address is changed, the switch generates this message for each PIM-configured VLAN. RMON_PIM_IP_ADDR_CONFIG
626	I/F removal with IP <ip-addr> on vid <vlan-id>	warning	Indicates that a PIM interface (VLAN) has been removed from the router as a result of an IP address change or removal. RMON_PIM_IF_REMOVAL
627	Unable to allocate <text-str> table	fatal	The router was not able to create some tables PIM-DM uses. Indicates that the router is low on memory resources. Remedies include one or more of the following: <ul style="list-style-type: none"> <li>• Reduce the number of configured VLANs by moving some VLANs to another router.</li> <li>• Free up system resources by disabling another feature, such as one of the spanning-tree protocols or either the RIP or the OSPF routing protocol. (Unless you are using static routes, you will need to retain a minimum of one unicast routing protocol.) Another option that may help is to reduce the number of configured QoS filters.</li> <li>• Move some hosts that create multicast demand to another router.</li> </ul> RMON_PIM_TABLE_ALLOC_ERROR
628	Bad <param-name> in <pkt-type> pkt from IP <ip-addr>	info	The PIM packet was dropped due to a bad parameter in the packet from the specified IP address. RMON_PIM_PKT_BAD_PARM
629	PIM socket error	info	There was an error regarding the PIM socket, either on a socket call or a recvfrom call. RMON_PIM_SOCKET_ERROR
630	No RP for group <ip-addr>	standard	PIM-SM needed an RP for the indicated group address, but none was found. RMON_PIM_NO_RP_FOR_GROUP
631	No route to source/rp <ip-addr>	standard	PIM was unable to find a route to the specified IP address. RMON_PIM_NO_ROUTE
632	Port <port-num> Duplex Mismatch. Reconfig port to Full Duplex.	warning	There is a mismatch in the configured transmission mode between the specified port and a peer. Reconfigure the data transmission setting to Full Duplex. RMON_PPMGR_DMM_SET_FULL_WARN

## Event Log Messages

#	Message	Severity	Description
633	Port <port-num> Duplex Mismatch. Reconfig port to Auto.	warning	There is a mismatch in the configured transmission mode between the specified port and a peer. Reconfigure the data transmission setting to Auto (auto-configuration). RMON_PPMGR_DMM_SET_AUTO_WARN
634	Front panel clear button pressed; switch reset.	info	A manual reset of the switch is taking place after pressing the Clear button. RMON_FPANEL_RESET_ON_CLEAR
635	Alternate password used to gain access.	info	A different password was used to access the switch. RMON_FPANEL_ALT_PASS_USED
636	SFTP session from <ip-addr>	info	An SFTP session was started from the specified IP address. RMON_SSH_SFTP_SESS
637	SCP session from <ip-addr>	info	An SCP session was started from the specified IP address. RMON_SSH_SCP_SESS
638	Not enough space available to complete the file transfer	info	The file transfer was aborted due to insufficient memory. RMON_SSH_FT_NO_MEM
639	SCP error: <ip-addr>	info	An error was detected in the SCP session with the device at the specified IP address. RMON_SCP_ERR
640	SFTP error: <ip-addr>	warning	An error was detected in the SFTP session with the device at the specified IP address. RMON_SFTP_ERR
641- 647	—	—	Reserved RMON_SSH_UNUSED3 - 9
648	<mod-num>: Self-test failed <msg-txt>	fatal	A self-test failure occurred on the module. RMON_HPESP_SELF_TEST_ERROR
649	<mod-num>: base configuration transfer failed	fatal	The module configuration being performed by the BIOS handshake protocol failed. RMON_HPESP_BIOS_ERROR
650	<mod-num>: incompatible BIOS version: <msg-txt>	fatal	The BIOS version is not supported by the current switch firmware. RMON_HPESP_INCOMPATIBLE_BIOS
651	<mod-num> diagnostics partition is ready	fatal	The diagnostics partition has been loaded and is ready for user interaction. RMON_HPESP_DIAGNOSTICS
652	<mod-num>: Maximum client-port VLANs count reached	fatal	The maximum number of security VLAN groups have been configured on the module. RMON_HPESP_MAX_SEC_VLAN
653	<mod-num>: Maximum system VLANs count reached	fatal	The maximum number of VLANs have been configured on the module. RMON_HPESP_MAX_SYS_VLAN
654	<mod-num>: Reboot system to complete client-port configuration	fatal	Reboot the switch for the security VLAN configuration to take effect. RMON_HPESP_REBOOT

#	Message	Severity	Description
655	<mod-num>: Unable to create VLAN. <msg-txt>	fatal	A VLAN configuration on a downlink port has failed. RMON_HPESP_CONFIG_ERROR
656	<mod-num>: VLAN <vlan-id> is created.	info	A VLAN has been successfully configured and a downlink port is assigned as a tag member. RMON_HPESP_VLAN_CREATED
657	<mod-num>: Application initialization failed.	fatal	Module initialization has failed for one of the following reasons: <ul style="list-style-type: none"> <li>• HPESP version is not supported.</li> <li>• VLANs cannot be created.</li> </ul> RMON_HPESP_APP_ERROR
658	<mod-num>: Illegal event <event-type> at state <state-machine>	fatal	Used for debugging. RMON_HPESP_ILLEGAL_EVENT
659	<mod-num>: Excessive reboots detected	fatal	The module rebooted many times before establishing communication with the switch. The watchdog timer expired unexpectedly. The module is inoperational. RMON_HPESP_EXCESSIVE_REBOOT
660	<mod-num> removed before shutdown completed	fatal	The module was removed before the shutdown process was complete. RMON_HPESP_SHUTDOWN_NOT_COMPLETE
661	<mod-num> is safe for removal	info	The module shutdown process is complete and it is safe to remove the module. RMON_HPESP_SAFE_TO_REMOVE
662	<mod-num>: incompatible application version: <msg-txt>	fatal	An application on the module is not supported by the current switch firmware. RMON_HPESP_INCOMPATIBLE_ESPD
663	<mod-num> member of one or more <vlan-type>	warning	Ports on the module are configured as members of both client and non-client VLANs, which may compromise switch security. RMON_HPESP_SECVLAN_WARNING
664	<mod-num> is shutting down	info	The module has started the shutdown process. RMON_HPESP_SHUTDOWN_INITIATED
665	<mod-num> is rebooting	info	The module is rebooting. RMON_HPESP_REBOOTING
666	<mod-num> is booting	info	The module is booting. RMON_HPESP_BOOTING
667	<mod-num> is ready	info	The module has booted and is operational. RMON_HPESP_READY
668	<mod-num> HPLAP send TLV error condition <error-type> on connection ID <connection-id>	info	A transfer TLV failure has occurred on the module in the specified connection. RMON_HPESP_HPLAP_SENDFLV_ERROR
669	VLAN <vlan-id> caution <msg-txt>	info	A caution message is displayed concerning VLAN configuration on the module. RMON_HPESP_VLAN_CFG_WARNING

## Event Log Messages

#	Message	Severity	Description

#	Message	Severity	Description
770	Failed to alloc msg buffer for <routine-name> event	standard	A message buffer could not be allocated in the specified routine. RMON_VRRP_NO_MSG_BUF
771	Unable to add MCAST address <mcast-addr>	fatal	Initialization failed because the specified VRRP multicast receive address could not be set up. RMON_VRRP_CANNOT_ADD_MCAST_DEST
772	Illegal event/state combination called	warning	VRRP received an illegal event/state combination. RMON_VRRP_ILLEGAL_EVENT_STATE_ERROR
773	Pkt rcvd that was too short, len = <bytes>, min = <bytes>	warning	A VRRP packet of the specified length was received, which is less than the minimum supported packet size. RMON_VRRP_PKT_TOO_SHORT
774	Vrid <vr-id>, Vid <vlan-id> recd pkt with checksum error	warning	The VR on the specified VLAN has received a VRRP advertisement packet with a checksum error. The VR has therefore dropped that packet. RMON_VRRP_CHECKSUM_ERROR
775	Pkt rcvd with version number <ver-num>, expected <ver-num>	warning	A VRRP packet was received with a wrong version number. RMON_VRRP_VER_MISMATCH
776	No VR with vrid <vr-id> found on vid <vlan-id>	warning	Indicates a VRRP packet received for a VR that does not exist on the VLAN. This can indicate asymmetric configuration of VRs across VRRP routers. RMON_VRRP_NO_VR_ON_VID
777	Vrid <vr-id>, Vid <vlan-id> recd pkt with bad IP-TTL	warning	A VRRP packet was received by the VR on the specified VLAN with an IP TTL value not equal to 255. RMON_VRRP_PKT_REC'D_WITH_BAD_TTL
778	Vrid <vr-id>, Vid <vlan-id> recd pkt with auth type mismatch	warning	Indicates the VR has received a packet with the auth type mismatch authentication type set to 1 or 2. These are generally valid authentication types, but are not required by RFC 3768. Thus, the software supports only an authentication type of 0 (zero), and VRRP packets with 1 or 2 for authentication type are dropped. For more information, refer to the "Operating Notes" section in the "Virtual Router Redundancy Protocol (VRRP)" chapter of the <i>Multicast and Routing Guide</i> . RMON_VRRP_AUTH_TYPE_MISMATCH
779	Vrid <vr-id>, Vid <vlan-id> recd pkt with invalid auth type	warning	Indicates the VR has received a VRRP packet with an authentication type set to a value other than the 0, 1, or 2 (allowed by RFC 3768) and has dropped the packet. RMON_VRRP_INVALID_AUTH_TYPE
780	Vrid <vr-id>, Vid <vlan-id> recd pkt with advt int mismatch	warning	A VR on the specified VLAN has received a VRRP packet with an advertising interval that does not match the interval in the VRRP Master message and has dropped the packet. RMON_VRRP_ADVT_INT_MISMATCH
781	Vrid <vr-id>, Vid <vlan-id> recd pkt with invalid type	info	A VRRP packet was received by the indicated VR on the indicated VLAN with the packet type not equal to 1. RMON_VRRP_INVALID_PKT_TYPE

## Event Log Messages

#	Message	Severity	Description
782	Vrid<vr-id>, Vid <vlan-id> recd pkt with IP addr mismatch	warning	A VRRP packet was received by the VR on the specified VLAN with virtual IP address(es) that did not match the virtual IP addresses configured on the receiver VR. RMON_VRRP_VR_IP_MISMATCH
783	Pkt recd on a non-VRRP Vlan with vid <vlan-id>	warning	A VRRP packet was received on a VLAN that does not have any VRs. This could possibly be a result of misconfiguration of VRs on VLANs. RMON_VRRP_NO_VID
784	Vrid<vr-id>, Vid <vlan-id> recd pkt from a duplicate master	warning	A VRRP packet was received from a duplicate master VR by the VR on the specified VLAN. RMON_VRRP_DUP_MASTER_RTR
785	Failed to allocate pkt buffer for <pkt-type>	standard	A failure to allocate a packet buffer for gratuitous ARP or VRRP traffic occurred. RMON_VRRP_PKT_ALLOC_FAILURE
786	Failed to allocate memory for <vrrp-app>	standard	A failure to allocate memory for the specified VRRP application occurred. RMON_VRRP_MEM_ALLOC_FAILURE
787	Failure to send out pkt for vrid <vr-id>, vid <vlan-id>	standard	A VRRP packet could not be sent out for the specified VR on the specified VLAN due to a system-dependent problem. If packets could not be sent out, the expected protocol operation may be hampered. RMON_VRRP_PKT_SEND_FAILURE
788	VRRP has been enabled on this router	info	VRRP was enabled at the global config level RMON_VRRP_GLOBAL_ENABLE
789	VRRP has been disabled on this router	info	VRRP was disabled at the global config level. RMON_VRRP_GLOBAL_DISABLE
790	Vrid <vr-id> on Vid <vlan-id> has taken owner IP ctrl	info	The virtual router on the specified VLAN has taken control of its owned IP addresses. RMON_VRRP_VR_TOOK_OWN_IP_CTRL
791	Vrid <vr-id> on Vid <vlan-id> has taken backup IP ctrl	info	The virtual router on the specified VLAN has taken control of its backup IP addresses. RMON_VRRP_VR_TOOK_BACKUP_IP_CTRL
792	Vrid <vr-id> on Vid <vlan-id> lost backup IP ctrl	info	The specified VR has been preempted by either the owner or a higher-priority master. RMON_VRRP_VR_LOST_BACKUP_IP_CTRL
793	Vrid <vr-id>, Vid <vlan-id> IP addr is duplicated on network	warning	The virtual IP address owned by the VR on the specified VLAN is duplicated on the network. RMON_VRRP_VR_DUP_IP_DETECTED
794-795	—	—	Reserved RMON_VRRP_UNUSED_8 - 9
796	Transfer completed	info	USB successfully completed the file transfer. RMON_USB_XFER_COMPLETE
797	Transfer canceled. No workspace left on device.	warning	File transfer was interrupted due to insufficient memory on the USB device to complete the operation. RMON_USB_NO_SPACE

#	Message	Severity	Description
798	Transfer aborted, wrong file	warning	File transfer stopped due to a missing file or an invalid ID string or revision. RMON_USB_WRONG_FILE
799	Request failed.	warning	TFTP request failed due to resource error. RMON_USB_REQ_FAILED
800-804	—	—	Reserved RMON_USB_UNUSED_1 - 5

#	Message	Severity	Description
841	port <port-num> - BPDU protection auto-reenable timer expired.	info	The timer used to re-enabled BPDU protection has expired on the specified port. RMON_STP_ENABLE_AFTER_ERROR
842-849	—	—	Reserved RMON_STP_UNUSED_9 - 16
850	<mod-num>: Server <ip-addr> packet received on untrusted port <port-num> dropped	warning	A DHCP server is trying to transmit a packet on an untrusted port. RMON_DSNOOP_UNTRUSTED_PORT_SERVER
851	<mod-num>: Ceasing untrusted server logs for <secs>	warning	Multiple packets were received on an untrusted port from a DHCP server and the packets were dropped. To avoid filling the event log with repeated transmission attempts from an untrusted server, dropped-packet events will not be logged for the specified number of seconds. RMON_DSNOOP_UNTRUSTED_PORT_SERVER_SUSP
852	<mod-num>: Client packet destined to untrusted port <port-num> dropped	warning	A unicast packet with a destination address on an untrusted port was received from a DHCP client and was dropped. RMON_DSNOOP_UNTRUSTED_PORT_CLIENT_DEST
853	<mod-num>: Ceasing untrusted port destination logs for <secs>	warning	Multiple unicast packets with an untrusted port destination were received from a DHCP client and were dropped. To avoid filling the event log with repeated messages about dropped packets with an untrusted port destination, these events will not be logged for the specified number of seconds. RMON_DSNOOP_UNTRUSTED_PORT_CLIENT_SUSP
854	<mod-num>: Unauthorized server <ip-addr> detected on port <port-num>	warning	An unauthorized DHCP server is trying to send packets to the port. The server packets are dropped because the server address is not configured in the authorized server table maintained by DHCP snooping. RMON_DSNOOP_UNAUTHORIZED_SERVER
855	<mod-num>: Ceasing unauthorized server logs for <secs>	warning	Multiple packets from an unauthorized DHCP server were dropped. To avoid filling the event log with repeated messages about dropped packets from an unauthorized DHCP server, these events will not be logged for the specified number of seconds. RMON_DSNOOP_UNAUTHORIZED_SERVER_SUSP
856	<mod-num>: Received untrusted relay information from client <mac-addr> -<mac-addr> on port <port-num>	warning	Packets with relay option information were received from a DHCP client on an untrusted port and were dropped. RMON_DSNOOP_UNTRUSTED_OPT82
857	<mod-num>: Ceasing untrusted relay information logs for <secs>	warning	Packets with DHCP relay information were received from a DHCP client on an untrusted port and were dropped. To avoid filling the event log with repeated attempts, events for packets with untrusted DHCP relay information will not be logged for the specified number of seconds. RMON_DSNOOP_UNTRUSTED_OPT82_SUSP
858	<mod-num>: Client address <mac-addr> not equal to source MAC <mac-addr> detected on port <port-num>	warning	The DHCP agent detected that a source MAC address in a client packet does not match the MAC address in the Change Address (chaddr) field of the packet. The packet was dropped. RMON_DSNOOP_MAC_MISMATCH

## Event Log Messages

#	Message	Severity	Description
859	<mod-num>: Ceasing client address mismatch logs for <secs>	warning	Packets that were received from a DHCP client with mismatched source MAC address and Change Address (chaddr) values were dropped. To avoid filling the event log with repeated attempts, events for mismatched DHCP client addresses will not be logged for the specified number of seconds. RMON_DSNOOP_MAC_MISMATCH_SUSP
860	<mod-num>: Attempt to release address <ip-addr> leased to port <port-num> detected on port <port-num>	warning	A DHCP client tried to release an IP address while a DHCPRELEASE or DHCPDECLINE packet was received on a port different from the port to which the IP address is leased. RMON_DSNOOP_BAD_RELEASE
861	<mod-num>: Ceasing bad release logs for <secs>	warning	Packets that were received from a DHCP client with an invalid release were dropped. To avoid filling the event log with repeated messages about dropped DHCP client packets, these events will not be logged for the specified number of seconds. RMON_DSNOOP_BAD_RELEASE_SUSP
862	<mod-num>: Lease table is full, DHCP lease was not added	warning	The lease database maintained by DHCP snooping is full. The lease entry cannot be added to the table. RMON_DSNOOP_TABLE_FULL
863	<mod-num>: Ceasing lease table is full logs for <secs>	warning	Multiple attempts were made to add an entry to the lease database when the lease table is full. To avoid filling the event log with repeated attempts, events reporting that the lease table is full will not be logged for the specified number of seconds. RMON_DSNOOP_TABLE_FULL_SUSP
864	<mod-num>: reading <port-num>:<mac-addr> <ip-addr>	warning	The lease file specified by the DHCP snooping database string could not be read. RMON_DSNOOP_READ_LEASES_ERROR
865	<mod-num>: Ceasing remote server lease file read status logs for <secs>	warning	Multiple attempts to read the lease file from a remote server were made. To avoid filling the event log with repeated attempts, status messages for failed lease-file read operations will not be logged for the specified number of seconds. RMON_DSNOOP_READ_LEASES_SUSP
866	<mod-num>: writing <port-num>:<mac-addr> <ip-addr>	warning	The lease file specified by the DHCP snooping database string could not be written to the remote server. RMON_DSNOOP_WRITE_LEASES_ERROR
867	<mod-num>: Ceasing remote server lease file write status logs for <secs>	warning	Multiple attempts to write the lease file to a remote server were made. To avoid filling the event log with repeated attempts, status messages for failed lease-file write operations will not be logged for the specified number of seconds. RMON_DSNOOP_WRITE_LEASES_SUSP
868-871	—	—	Reserved RMON_DSNOOP_UNUSED_1 - 4
872	RMON <file-type> file corrupt, is being deleted	warning	The RMON alarms or events file is corrupt and will be deleted. RMON_SNMP_REMOVE_CORRUPT_FILE
873-882	—	—	Reserved RMON_SNMP_UNUSED_1 - 10
