Replacement Fan Tray Instructions

for the ProCurve Series zl Switches

The fan tray is hot swappable. It can be removed and replaced without removing power from the switch. However, install the new fan tray immediately (within two minutes) after removing the old fan tray to avoid overheating and a switch shutdown (within three minutes).
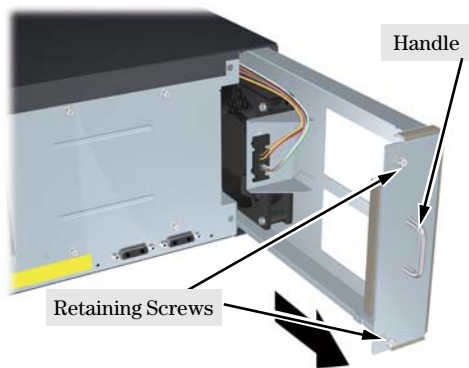

1. Release the retaining screws

2. Grasp the handle and remove the old fan tray

3. Install the new fan tray

4. Tighten the retaining screws

WARNING

To avoid contact with spinning fans, if you are hot swapping out the fan tray assembly, pull the assembly out one-inch and allow the fans to stop rotating (approximately 20 seconds) before pulling it all the way out.
