Replacement Management Module Instructions
for the ProCurve Series zl Switches Management Modules

The switch does not have to be powered off, however when the management module is removed all ports will lose communication. ProCurve Networking recommends replacing the Management module, flash disk or battery (on the Management module) during scheduled down time.

1. On the module unscrew the retaining screws enough to disconnect them from the threaded holes in the switch.

2. Using the extractor handles, pull the module out from the slot.

3. Remove the flash disk from the failed module and install it into the replacement module.

4. Remove the battery from the failed module and dispose of properly.

5. Install the new battery that came with the replacement module into the replacement module.

6. Install the replacement module into the switch.

7. Use an equal amount of pressure and push both extractor handles closed to completely seat the module.
8. Tighten the retaining screws.
